INTRODUCTION

Teenagers contribute to, and suffer from, the consequences of motor vehicle collisions at a disproportionate rate. Teen drivers ages 16 - 19 are nearly three times as likely as drivers aged 20 or older to be in a fatal crash.¹

In 2019, 4,356 people were killed in crashes involving young drivers (aged 15 - 20). Of these fatalities, 1,603 were young drivers, 880 were passengers of young drivers, and the remaining 1,873 victims were non-occupants and occupants of the other vehicles involved in crashes with young drivers.² At particularly high risk are male drivers aged 16 – 18, teens driving with teen passengers, and newly licensed teens. Teen driver crashes more often involve: driver error, lack of safety belt use, excessive speed, reckless driving, single vehicle crashes, nighttime fatal crashes, increased risk with every additional passenger, distractions, and alcohol and drugs.

Teen motor vehicle crashes are preventable and there are proven strategies which can increase the safety of young drivers as well as all other road users. This resource guide provides links to organizations, programs, publications, and resources focused on teen driving safety. It is divided into five sections: (1) organizations; (2) prevention resources; (3) laws; (4) data sources; and (5) publications. The resources included in this guide are not meant to be comprehensive, nor are the listings intended as endorsements
