State by State Rate Comparison for Nonfatal Injuries Due to Motor Vehicle Crashes Among Children Ages 14 Years and Younger per 100,000 Population, 2007

All State Title V Maternal and Child Health programs are required to report on 12 Health Status Indicators. This fact sheet provides information on Health Status Indicator Measure # 4B: the rate per 100,000 of all nonfatal injuries due to motor vehicle crashes among children aged 14 years and younger. The data used for this comparison was reported by States in their 2009 State Title V Block Grant applications and obtained from the Maternal and Child Health TVIS reports. As the majority of the States indicated that the 2008 data was provisional, 2007 data was used.

In comparing the 2003 rate to the 2007 rate, 7 states remained the same, with the same being defined as +/- 9 from their 2003 rate. In 38 States, the rate decreased and in 4 States the rate increased from 2003 to 2007. One state did not provide data on this Health Status Indicator.

States whose rates remained the same from 2003 to 2006.

Georgia	Maryland	New Mexico	Vermont
Hawaii	Maine	South Carolina	

States whose rates decreased from 2003 to 2006.

Alabama	Connecticut	Kansas	Mississippi	Nevada	Tennessee	West Virginia
Alaska	Florida	Kentucky	Montana	Oklahoma	Texas	Wyoming
Arizona	Idaho	Louisiana	North Carolina	Oregon	Utah	
Arkansas	Illinois	Massachusetts	North Dakota	Pennsylvania	Virginia	
California	Indiana	Michigan	New Hampshire	Rhode Island	Washington	
Colorado	Iowa	Missouri	New Jersey	South Dakota	Wisconsin	

States whose rates increased from 2003 to 2006.

Minnesota	Nebraska	New York	Ohio
------------------	-----------------	----------	------

States in which data was not reported.

Delaware

Note: Highlighted States showed a change between the comparison period 2003-2006 and 2003-2007.
