

CHILD ACCESS to FIREARMS in the US

1 in 3 homes with children* have firearms Schuster (2000)

21 million children* live in homes with firearms Schuster (2000)

Schuster (2000) estimates:

12.8 million children* (61%) live in homes with **locked** firearms

5.7 million children* (27%) live in homes with **unlocked** firearms stored without ammunition

2.6 million children* (12%) live in homes with **unlocked** firearms that were loaded or stored with ammunition

= 100,000 children*

Estimates based off of 21,133,000 from Schuster (2000) Table 3

Children often find or handle firearms in the home without their parents' knowledge

According to Baxley (2006):

3 in 4 children ages 5-14 knew where firearms were hidden in the home

BUT

39% of their parents mistakenly thought that their child **did not** know the location of firearms

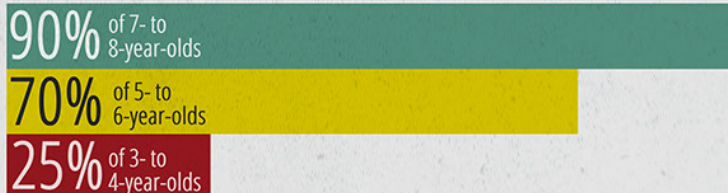

1 in 3 children ages 5-14 had handled a firearm in the home

BUT

22% of their parents mistakenly thought that their child had **never** handled a firearm

By the age of 3, some children are strong enough to pull the trigger of a handgun

Naureckas (1995)

*In this infographic, children are defined as under 18, unless otherwise specified

CHILD ACCESS TO FIREARMS IN THE US

1 in 3 homes with children* have firearms. 22 million children* live in homes with firearms (Schuster, Franke, Bastian, Sor, & Halfon, 2000)

According to Shuster (2000):

12.8 million children* (61%) live in homes with locked firearms

5.7 million children* (27%) live in homes with unlocked firearms with no ammunition

2.6 million children* (12%) live in homes with unlocked, loaded firearms or unlocked firearms stored with ammunition

*Estimates based off of 21,133,000 from Schuster (2000) Table 3, p. 592 (Schuster et al., 2000)

Children often find or handle firearms in the home without their parents' knowledge

According to Baxley (2006):

3 in 4 children ages 5-14 knew where firearms were hidden in the home, but 39% of their parents mistakenly thought that their child did not know the location of firearms (Baxley & Miller, 2006)

1 in 3 children ages 5-14 had handled a firearm in the home, but 22% of their parents mistakenly thought that their child had never handled a firearm (Baxley & Miller, 2006)

By the age of 3, some children are strong enough to pull the trigger of a handgun (90% of 7- to 8-year-olds, 70% of 5- to 6-year-olds, 25% of 3- to 4-year-olds) (Naureckas, Galanter, Naureckas, Donovan, & Christoffel, 1995)

*Children are defined as under 18, unless otherwise specified.
