</table>
Goals:

1. Increase Colorado’s motor vehicle partners understanding of both the data sources and data related to marijuana impaired driving. Measure: Analysis of new State data sources related to marijuana impaired driving, such as BRFSS and Healthy Kids Colorado.
   - **Mid-term update:** Members of the Colorado Team identified all of Colorado’s current data sources related to marijuana impaired driving and discussed data gaps. Colorado released a new report, using Health Kids Colorado (YRBS) data, that analyzed the new questions related to marijuana use and marijuana impaired driving. Colorado shared this resource, as well as a number of other surveys with marijuana impaired driving data with other CoP members during the February learning collaborative call. The Colorado Department of Transportation and the Colorado Department of Health and Environment will host a motor vehicle conference in June 2015, which will include a half-day session on what we know about marijuana impaired driving after the first year of marijuana legalization.
   - **Final Update:** Members of the Colorado Team partnered to host a two-day Colorado’s Road Health Summit, which included a half-day session on marijuana impaired driving. A six-member panel comprising law enforcement, judicial, toxicology, and marijuana industry partners discussed a variety of issues related to marijuana impaired driving and highlighted the data that is currently available, as well as data gaps. The Colorado Department of Public Health and Environment also worked with partners to analyze current state data sources related to marijuana impaired driving, including BRFSS data, hospitalization data, and emergency department data. The Retail Marijuana Education Program created a number of fact sheets and data reports, which are available at: https://www.colorado.gov/marijuana/shareable-resources.

2. Update the State’s motor vehicle safety action plan to include activities related to preventing marijuana impaired driving among teens. Measure: Updated action plan.
   - **Mid-term update:** The Colorado Teen Driving Alliance added action steps related to marijuana impaired driving to the Colorado Strategic Highway Safety Plan and are in the process of adding more specific action items to the 2015 Colorado Teen Driving Alliance Plan. Action steps will include promoting the Colorado Department of Transportation’s marijuana impaired driving prevention campaign, as well as the Colorado Department of Public Health and Environment’s general campaign to educate the public about Colorado’s marijuana laws.
   - **Final Update:** The Colorado Teen Driving Alliance worked on pulling together the impaired driving panel for the Colorado Road Health Summit in June 2015. Members disseminated materials and promoted social media related to the Colorado Department of Transportation’s marijuana impaired driving prevention campaign and the Colorado Department of Public Health’s Good to Know campaign, which contains some driving related messages. Members of the Colorado Teen Driving Alliance also began providing technical assistance to new community grantees that the Colorado Department of Transportation is funding to work on teen distracted and impaired driving.
3. Improve questions related to impaired and distracted driving on the Traffic Accident Report Form (DR2447) in collaboration with the State Traffic Records Advisory Committee (STRAC). Measure: Updated list of questions provided to STRAC.
   
   o **Mid-term update:** The motor vehicle epidemiologist housed at the Colorado Department of Public Health and Environment and the impaired driving occupant protection manager at the Colorado Department of Transportation serve on STRAC and are in the process of working with committee members to improve questions related to impaired driving on the Traffic Accident Report Form. Additionally, they serve on the Task Force on Drunk and Impaired Driving, which is working to identify other ways to improve Colorado’s surveillance off drug-impaired driving issues.

   o **Final Update:** Motor vehicle partners in Colorado are still collaborating to improve questions related to impaired and distracted driving on the Traffic Accident Report Form. The Colorado Department of Public Health and Environment’s motor vehicle epidemiologist began chairing a Data and Evaluation Work Group for the Task Force on Drunk and Impaired Driving. This group worked together to map out how all of the state data sources related to each other. It is likely that legislation will be introduced during Colorado’s 2016 Legislative Session that will separate the impaired driving code in Colorado Statute, which currently does not distinguish between alcohol-impaired driving and drug-impaired driving. If the legislation is successful, Colorado will be able to improve impaired driving surveillance.

**Greatest Accomplishment of the DID CoP Team:**

The Colorado Team’s greatest accomplishments were gathering over 160 motor vehicle partners for the Colorado Road Health Summit. Attendees participated in a half-day session specifically focused on marijuana-impaired driving. Additionally, Colorado partners improved their understanding of the current data sources available to monitor impaired driving for teens and began partnering to improve Colorado’s motor vehicle data systems.

**Next Steps:**

The Colorado Teen Driving Alliance will continue to meet on a monthly basis to work on teen distracted and impaired driving issues. Members of the Alliance will continue to educate decision makers about the issue of marijuana-impaired driving using the data compiled over the last year. Colorado will continue to improve its data systems to enhance the surveillance of impaired driving.

**Tools Selected:**

- Logic Model
- Action Plan
Issues Covered and Strategies Implemented:

Distraction by Passengers
- Data Collection
- Mandates, Policies, or Legislation
- Funding

Drowsy Driving
- Data Collection

Drunk Driving
- Data Collection
- Interventions, Campaigns, and Programs
- Mandates, Policies, or Legislation
- Funding

Eating, drinking, and grooming while driving
- Interventions, Campaigns, or Programs
- Funding

Impaired driving from illicit drugs
- Data Collection
- Mandates, Policies, or Legislation
- Funding

Impaired driving from marijuana
- Data Collection
- Interventions, Campaigns, and Programs
- Mandates, Policies, or Legislation
- Funding

Impaired driving from prescription/over-the-counter drugs
- Data Collection
- Interventions, Campaigns, or Programs
- Mandates, Policies, or Legislation
- Funding

Motor vehicle crashes and technology/cell phone use
- Data Collection

---

1 On Colorado crash reports, data for eating, drinking, and grooming are grouped as “Distracted-Other.”
• Interventions, Campaigns, and Program
• Mandates, Policies, or Legislation
• Funding
